

HEALTHY FEET CENTER

ONYCHOMYCOSIS

Onychomycosis is a fungal infection of the toenails. Dermatophytes are the fungi most commonly responsible for onychomycosis. 90% of these dermatophytes, Trichophyton, Epidermophyton, Microsporum and Candida are responsible in causing onychomycosis on toenails.

You may suffer from onychomycosis if you have one or more of the following symptoms:

- Thickened nail
- Crumbly or brittle nail
- Nail distorted in shape or separated
- Nail with no luster or shine
- A white, yellow, or brown coloured nail, caused by debris build-up

Our treatment plan of 4 sessions of 12 minutes each appointment under the use of cold low level laser therapy, promises clear looking Healthy Nails with simple painless treatments and with no side effects. So you can enjoy healthy and beautiful toenails again.
